

EDITORIAL

JSARA: The Journal of the Southeastern Association for Research in Astronomy is founded to provide a reliable, ADS-searchable outlet for the publication of the results of undergraduate astronomical research projects, starting with those resulting from the SARA Research Experiences for Undergraduates (REU) Summer Intern Program, and research lead by SARA member university undergraduates. This issue contains the research manuscripts from the students and faculty participating in the Summer 2007 SARA REU Program, plus three additional research papers from SARA member institution undergraduates.
